Privacy Datasets

- **Towards more realistic scenario**
 - **10 stage continual settings (per 3 people, 10 QnA forget request)**
 - **6 - Evaluation metrics**
- Target {
- Forget set** : User's forget request (Detected sensitive info)
 - Retain (1)** : User's data Used for unlearning loss – (Detected, but not sensitive, or desirable to keep)
 - Retain (2)** : User's data not used for unlearning loss – (To see retain generalization)
 - Non-Target (1)** : Other Individuals completely excluded from training (Split separately)
 - Utility (2)** : Near-utility (GPT4o-gen)
 - Utility (3)** : Far-utility (Public benchmark dataset : [winogrande_xs_validation.json](#))
